

Confirmation of gene regions in *L. monocytogenes* 4a and 4c strains compared to those in *L. monocytogenes* 4a L99 using PCR. Lanes: M, 1 Kb Plus DNA ladder (Invitrogen); 1, *L. monocytogenes* 4a L99; 2, *L. monocytogenes* 4a SLCC2774; 3, *L. monocytogenes* 4a ATCC19114; 4, *L. monocytogenes* 4a SLCC5069; 5, *L. monocytogenes* 4a SLCC5070; 6, *L. monocytogenes* 4c SLCC2376; 7, *L. monocytogenes* 4c SLCC4925 and 8, *L. monocytogenes* 4c SLCC4954. Chromosomal DNA was isolated using DNAeasy blood&tissue DNA isolation kit (Qiagen) and PCR was performed by using the Expand high-fidelity PCR system (Roche) by following the protocol supplied by manufacturer. Primer sequences for all amplicons are the following (in 5'-3' sequence): *lmo4a\_0399* ACCAAGCGATGGAAGTACGG, *lmo4a\_0340* CAACAATCCAACCTACCGTA, *lmo4a\_1723* GATTGATTGCAAGTGGTGTG, *lmo4a\_1724* CAGCAAGAACATGAGACGAGTA, *lmo4a\_2472* TGCAACTGGTAATTTGAAGC, *lmo4a\_2473* CTTATTACACGAGGCGAAC, *lmo4a\_2886* CCAAGTGATATTCGACGT and *lmo4a\_2888* CGTGTGATATTGAGCTGG.
